gemstone-rs Feature Map

This map is the Rust equivalent of `gemstone-examples plan3-map` in `gemstone-py`: it ties each feature stream to the crates, examples, docs, and Python reference point that inspired it.

Run it from the CLI:

```
gemstone-rs hello
gemstone-rs compare gemstone-py
gemstone-rs compare gemstone-py --gaps
gemstone-rs examples map
gemstone-rs examples map --json
```

`hello` is the no-live sanity check that mirrors `gemstone-examples hello`. `compare gemstone-py` prints a compact version of the Python/Rust comparison guide. `compare gemstone-py --gaps` prints the remaining parity gaps with next actions and verification commands. JSON output is intended for CI, docs checks, and editor tooling.

Streams

Stream	Feature	Rust surface	Examples	Docs	gemstone-
1	Runtime and GCI loading	<code>gemstone-gci</code> , <code>gemstone-rs::Config</code>	<code>hello</code> , <code>hello_gemstone</code> , <code>quickstart</code>	<code>docs/setup-guide.md</code> , <code>docs/performance-safety.md</code>	<code>gemstone_</code> native backe
2	Safe sessions and transactions	<code>gemstone-rs::Session</code> , <code>TransactionGuard</code>	<code>quickstart</code> , <code>transactions</code> , <code>live_smoke_cookbook</code>	<code>docs/user-manual.md</code> , <code>docs/cookbook.md</code>	<code>GemStoneS</code> <code>SessionFa</code> transaction
3	Browser and inspection	<code>gemstone-rs::browser</code> , CLI <code>browse</code> , <code>gemstone-rs-explorer</code>	<code>browser</code> , <code>tooling/cli-browser-walkthrough.md</code>	<code>docs/user-manual.md</code> , <code>docs/explorer.md</code>	<code>gemstone_</code> <code>python-ge</code> database-c

Stream	Feature	Rust surface	Examples	Docs	gemstone-
4	OOP and value handling	<code>Oop</code> , <code>Value</code> , export-set helpers	<code>oop_values</code>	<code>docs/user-manual.md</code> , <code>docs/performance-safety.md</code>	Managed OOP typed access
5	BridgeRoot object mapping	<code>gemstone-rs::bridge</code> , <code>gemstone-rs-macros</code>	<code>bridge_root_mapping</code> , <code>derive_mapping</code> , <code>generated_mapping_app</code>	<code>docs/object-mapping.md</code> , <code>docs/cookbook.md</code>	Smalltalk Persistence examples
6	Typed codegen	<code>gemstone-rs::codegen</code> , CLI <code>codegen</code> and <code>profile</code>	<code>codegen_preview</code> , <code>codegen_workflow</code> , <code>generated_wrapper_app</code>	<code>docs/codegen.md</code> , <code>docs/profile-schema.md</code>	<code>gemstone-typed_codegen_de</code>
7	Explorer workflow	<code>gemstone-rs-explorer</code>	<code>tooling/explorer.md</code>	<code>docs/explorer.md</code> , <code>docs/screenshots.md</code>	<code>python-gemstone-database-e</code>
8	VS Code workbench	<code>vscode-gemstone-rs-workbench</code>	<code>tooling/vscode-workbench.md</code>	<code>docs/vscode-workbench.md</code>	<code>gemstone-</code>

Stream	Feature	Rust surface	Examples	Docs	gemstone-
9	Rust web services	<code>gemstone-rs</code> examples plus planned Axum/Actix adapters	<code>http_service</code> , <code>axum-service/README.md</code>	<code>docs/examples-guide.md</code> , <code>docs/cookbook.md</code>	FastAPI, Lit examples
10	Release and verification	<code>scripts</code> , <code>Makefile</code> , GitHub Actions	Release verification commands	<code>docs/release-checklist.md</code>	PyPI/TestPy VSIX releases
11	Shared native core	<code>gemstone-gci</code> , <code>gemstone-rs</code> , future <code>gemstone-py-native</code> wrapper	Shared-core integration plan	<code>docs/shared-core-integration.md</code>	<code>gemstone-</code>

What This Says Compared With `gemstone-py`

`gemstone-rs` is strongest where Rust is naturally valuable: direct native GemStone access, explicit OOP/value handling, typed generated wrappers, BridgeRoot mapping, and CLI/explorer tooling that can run without Python in the process.

`gemstone-py` remains stronger where Python already has mature product shape: web framework adapters, async examples, installed example launchers, the database explorer, package extras, and broader release surfaces.

The projects should converge by sharing the Rust native core underneath `gemstone-py-native`, while keeping the Python and Rust APIs idiomatic for their respective users.

This PDF was generated locally from docs/. If you edit the Markdown sources, rerun `python docs/build_pdf_docs.py`.
